1. Introduction

1.1. Background

The Solihull Local Plan (SLP), adopted in December 2013, sets out a long-term spatial vision for how the Borough of Solihull will develop sustainably between 2011 and 2028. It focuses on twenty-one core policies to deliver the spatial strategy. Policy P7 (Accessibility and Ease of Access) identifies a range of accessibility criteria that new developments are expected to meet, in order to focus development in the most accessible locations, enhance existing levels of accessibility and promote ease of access. The accessibility criteria for proposed housing developments are set out as follows:

- Within an 800m walk distance of a primary school, doctor’s surgery and food shop offering a range of fresh food; and
- Within a 400m walk distance of a bus stop served by a commercial high frequency bus services (daytime frequency of 15 minutes or better) providing access to local and regional employment and retail centres; and/or
- Within an 800m walk distance of a rail station providing high frequency services (three or more per hour during peak periods) to local and regional employment or retail centres.

Atkins was commissioned by Solihull Metropolitan Borough Council (SMBC) in 2015 to review the accessibility criteria in relation to accessibility to local facilities and public transport infrastructure. The purpose of this work was to inform the evidence base for the SLP review. A systematic approach was adopted whereby consideration was given initially to areas of the Borough which met the Policy P7 criteria set out in the 2013 SLP. A further assessment was undertaken whereby relaxations to the Policy P7 criteria were also considered.

In 2019, SMBC commissioned Atkins to undertake a review of 294 sites put forward as part of the SLP ‘call for sites’ against the Policy P7 criteria. In July 2020, SMBC commissioned Atkins to update the 2019 assessment, taking into account new sites which have been put forward for review and changes to some of the 294 sites assessed previously. The 2020 commission assesses 30 new sites and 23 amended sites from the previous commission (2019) against the Policy P7 criteria. These sites have then been compared against the 271 sites which have remained unchanged from the 2019 assessment. Therefore, a total of 324 sites have been included within the overall assessment.

The 30 new sites and 23 amended sites which SMBC have commissioned Atkins to assess are outlined in Table 1-1.

Table 1-1 - SMBC Sites (2020)

Site Reference	Site Name	Site Type
500	Land at Balsall Common	New Site
501	Land to the north Lugtrout Lane	New Site
503	Land off Stratford Road	New Site
506	227 Lugtrout Lane	New Site
507	40 Houndsfield Lane	New Site

Site Reference	Site Name	Site Type
564	Land West of Four Ashes Road	New Site
502	Land off Jacobean Lane	Amended Site
513	Land east of Grange Road (1)	Amended Site – Removed Site 344 (2019 Report)
524	Land east Nailcote Farm	Amended Site
526	Land incl 15 Jacobean Lane	Amended Site – Removed Sites 324 and 68 (2019 Report)
527	Land at Four Ashes Road	Amended Site – Removed Site 247 (2019 Report)
528	Revised site 195 - Damson Parkway	Amended Site – Removed Site 195 (2019 Report)
529	Revised site 196 Bickenhill Road	Amended Site – Removed Site 196 (2019 Report)
530	Revised site 197 Berkswell Road	Amended Site – Removed Site 197 (2019 Report)
542	Mayfield & Melbourne	Amended Site
543	Land to the rear of 74-108 Colehill Road	Amended Site – Removed Site 341 (2019 Report)
544	Broad Lane, Hawkhurst	Amended Site – Removed Site 426 (2019 Report)
545	Land at Tidbury Golf Club	Amended Site – Removed Site 209 (2019 Report)
548	Land at rear of Stratford Road	Amended Site – Removed Sites 13 and 121 (2019 Report)
549	Land at Three Maypoles	Amended Site – Removed Site 340 (2019 Report)
551	Land East Widney Manor Road	Amended Site – Removed Site 407 (2019 Report)
553	Land South of J4 M42	Amended Site
554	Land off Rumbush Lane	Amended Site – Removed Site 141 (2019 Report)
556	Land North of Main Road	Amended Site – Removed Sites 420 and 211 (2019 Report)
557	Barratts Farm - new sub	Amended Site – Removed Sites 30, 33, 169, and 236 (2019 Report)
559	Land off Four Ashes Road, BH	Amended Site
561	Damson Parkway	Amended Site – Removed Site 195 (2019 Report)

Site Reference	Site Name	Site Type
562	Land at Berkswell Road, Meriden	Amended Site – Removed Site 197 (2019 Report)
563	Land off Meriden Road	Amended Site – Removed Site 129 (2019 Report)

1.2. Report Purpose

This report provides details of the methodology used to inform the assessment and provides SMBC with additional analysis to include within the evidence base for the review of the 2013 SLP.

This report will assess the accessibility of the 30 new sites and 23 amended sites from the previous commission (2019) against the Policy P7 criteria. This report will then compare these sites against the 271 sites which have remained unchanged from the 2019 assessment. The 53 new or amended sites will be assessed using an updated database based on local facilities and public transport data from 2020. The remaining 271 sites from the 2019 Solihull Accessibility Mapping Report will be based on the previous database from 2018 as per SMBC instruction.

1.3. Report Structure

This report comprises the following:

- **Section 2** sets out the methodology used to produce isochrones for the accessibility criteria set out in the 2013 SLP (P7);
- **Section 3** describes the methodology for producing isochrones demonstrating relaxations of the accessibility criteria set out in the 2013 SLP (P7);
- **Section 4** details the methodology for assessing the relative accessibility of 324 potential residential sites against the accessibility criteria set out in the 2013 (P7); and
- **Section 5** summarises the findings and conclusions of the report.

2. Access to Local Facilities

2.1. Introduction

The section of the report sets out the methodology used for the first part of the accessibility study, which produced a set of isochrones to demonstrate areas which fall within the 2013 SLP criteria for maximum walking distances to local facilities and public transport infrastructure.

2.2. Walking Network

The distances set out in the accessibility criteria provided in Policy P7 of the 2013 SLP relate to walking distances to the given facilities. In order to examine access to local amenities and bus/rail services, a comprehensive network of walking routes had to be assembled in ArcMap (GIS Software). This layer was created using road network, shared cycle routes and public rights of way information. For off-road routes, further criteria were applied which required the route had to be surfaced and lit.

The following provides details of the methodology used to obtain a comprehensive network of suitable walking routes:

- **Ordnance Survey (OS) Integrated Transport Network (ITN) Road Network Layer** – provided by SMBC and includes all classifications of road including minor access roads. This was edited to remove roads which were unsuitable for walking along, including motorways e.g. M42 (and slip roads) and dual carriageways with no pedestrian facilities e.g. A452. It was assumed that where there is no specific infrastructure for pedestrians on country/rural roads that these would still most likely be used by pedestrians in these areas.
- **Shared Use Cycle Routes** - SMBC provided data for shared use cycle routes. These were classified as 'suitable' for the purposes of this study, if the route was lit. This was assessed using data provided by SMBC which gave the location of lamp posts. The selection of these routes was further verified using Google StreetView to make sure that this condition was met. Unlit routes which ran through parks in dense urban areas, were kept in the dataset as it could be considered that during the majority of the day (when most of the facilities would be accessed) and summer months (when there are longer daylight hours and walking is more likely) they would be useable. For the purposes of this study, any shared cycle routes which ran directly alongside the road were removed to avoid duplication of the road network.
- **Public Rights of Way (PRoW)** - SMBC provided data for PRoWs. These were assumed to be suitable if they had a metalled surface and lighting. Those PRoW which satisfied this criteria were then manually verified using satellite imagery. PRoW routes which were blocked or obstructed were also removed from the dataset. Unlit routes which ran through parks in dense urban areas, were kept in the dataset as it could be considered that during the majority of the day (when most of the facilities would be accessed) they would be useable. For the purposes of this study, any shared cycle routes which ran directly alongside the road were removed to avoid duplication of the road network.

These three datasets identified above were then merged to create the comprehensive walking network for use in the assessment. Walking Routes were included for up to 800m outside of the Solihull Borough Boundary, as this allowed the study to account for facilities which were outside of the Borough boundary, but within acceptable walking distances of areas within the Borough.

The existing infrastructure included in the walking network is considered to be up to date at the time of undertaking the study. It does not allow for proposed infrastructure that would be delivered as part of any future development within the Borough.

2.3. Preparation of Isochrones

Isochrones were created using the Network Analyst extension of ArcMap (GIS software). This used the walking network to create isochrones in 100m bands, up to the maximum acceptable distance for each facility set out in the 2013 SLP. The bands used for each facility are shown in Table 2-1.

Table 2-1 - Isochrone Bands for Each Facility

Facility	2013 SLP Criteria (m)
Bus Stops	100, 200, 300, 400
Food Shops	100, 200, 300, 400, 500, 600, 700, 800
Primary Schools	100, 200, 300, 400, 500, 600, 700, 800
GP Surgeries	100, 200, 300, 400, 500, 600, 700, 800
Rail Services	100, 200, 300, 400, 500, 600, 700, 800

2.4. Access to Local Amenities

To examine access to local amenities, the following criteria were assessed:

- The primary schools which were included in this study were state primary schools within Solihull Borough Boundary only. This data was obtained from the SMBC website, which was considered to be up to date and therefore required no further verification¹. Special Educational Needs schools were not included because they tend to have much wider catchment areas. A full list of primary schools used in the study is included in **Appendix A**.
- The GP surgeries which were included in this study were NHS GP facilities which fell within the Borough and up to 800m beyond the Solihull Borough Boundary. This data obtained from the NHS website and verified using Google Streetview². A full list of GP Surgeries used in the study is included in **Appendix A**.
- The food shops which were included in this study were all permanent, fresh fruit and vegetable retailers within the Borough and up to 800m beyond the Solihull Borough Boundary. This includes major supermarkets, discount food shops, and chain convenience stores including Spar, Co-Op and Costcutter. The food store database used in previous commissions of this work was reviewed to check that stores were still open and any which we not in operation anymore were removed from the database. An Internet search was then performed to identify any new food shops within the study area since the last commission. A full list of food shops, used in this study is included in **Appendix A**. Two retailers located in Birmingham Airport were included in the analysis, however, it is important to the note that these may not be viable food shops for members of the public to access on a regular basis.

2.5. Access to Bus Services

The 2013 SLP indicates that new residential developments should be located within a 400m walking distance of a bus stop served by a commercial high frequency bus service (daytime frequency of 15 minutes or better) and/or within an 800m walking distance of a rail station providing high frequency services (three or more per hour during peak periods) to local/regional employment and retail centres. Therefore, bus stops which provided a cumulative daytime frequency of 15 minutes or better which provide access to local/regional employment and retail centres, have been considered as part of the assessment.

TRACC³ was used to extract bus stops which satisfied this criteria. The coordinates of each bus stop were then mapped in GIS software. Table 2-2 details the conditions which were used to extract data from TRACC.

¹ Primary Schools – data from July 2020 from SMBC website <http://www.solihull.gov.uk/Resident/Schools-learning/findschool/infant-and-primary>

² GP surgeries – data from July 2020 from NHS website www.nhs.uk

³ TRACC – software used to assess multi-modal transport accessibility

Table 2-2 - Criteria for Data Extracted from TRACC

Time of Day/Week	Dataset	Criteria
Daytime Frequency	Date: January 2020, Area: Solihull Borough Boundary and up to 400m beyond Solihull Borough Boundary	Monday, 7am – 7pm

Bus stops within the Borough and up to 400m beyond the Solihull Borough Boundary, were included in the study. The number of services at each bus stop per hour between the hours of 7am-7pm was then extracted from TRACC. In line with the 2013 SLP criteria, those bus stops with a daytime frequency of 15 minutes or better were included within the assessment.

A full list of the bus stops and associated service frequency used within this assessment is included in **Appendix A**.

2.6. Access to Rail Services

To examine access to Rail Services, Railway Stations within the Borough and up to 800m beyond the Solihull Borough Boundary were included in the study. Policy P7 states that proposed housing developments should be located within an 800m walking distance of a Railway Station providing high frequency services (three or more per hour during peak periods) to local/regional employment and retail centres.

Following instruction from SMBC, only those Railway Stations which had at least three services per hour (07:00-08:00, 08:00-09:00, 16:00,17:00, and 17:00-18:00) in at least one direction during the peak periods (07:00-09:00 and 16:00 to 18:00) were included within this assessment.

It should be noted that Berkswell, Hampton in Arden, and Tile Hill Railway Stations have also been included because there are at least three services per hour to any destination regardless of direction. This was agreed with SMBC.

For the purpose of this commission, the TRACC database was used to extract train frequencies at each of the Railway Stations within the study area. TRACC data was obtained from the January 2020 dataset. TRACC data only provides the number of services at each Railway Station within the peak periods and does not include the direction of travel. Therefore, to determine the frequency of trains travelling in each direction per peak hour, Railway Station data from the 2019 Solihull Accessibility Mapping Report alongside National Rail Data from July 2020 and average journey frequency data from the Traveline website was used. This process identified minor changes to rail frequency by direction at each of the Railway Stations assessed. However, it was not considered that these changes would have a significant impact on the Railway Stations included within this commission.

The TRACC output is included in **Appendix A**.

2.7. Map Outputs

Maps outlining the services and amenities which meet the 2013 SLP criteria are provided in **Appendix B** (see Figures 1A -1F). Isochrones demonstrating those areas which satisfy the local facility, bus and rail criteria set out within the 2013 SLP (overlaid with the 324 residential sites) are provided in Figure 1G.

A summary of the Figures provided in **Appendix B** is provided below:

- A. Isochrone of up to 800m walk distance to primary schools in 100m bands;
- B. Isochrone of up to 800m walk distance to GP Surgeries in 100m bands;
- C. Isochrone of up to 800m walk distance to food shops in 100m bands;
- D. Isochrone of up to 400m walk distance to bus stops served by commercial bus services with a cumulative daytime frequency of 15 minutes or better;
- E. Isochrone of up to 800m walk distance to a rail station which is served by at least three services per hour in at least one direction during peak periods (07:00-09:00 and 16:00 to 18:00);
- F. Aggregated isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP; and
- G. Aggregated isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP overlaid with 324 housing sites from SLP review call for sites.

3. Relaxation of 2013 SLP Criteria

3.1. Introduction

Due to the modest coverage of all Policy P7 criteria, relaxations of these criteria and additional public transport criteria were also mapped, as part of the SLP review. This section of the report sets out the methodology used for this part of the assessment. The same datasets were used as outlined in Section 2.

3.2. Preparation of Isochrones

Isochrones were created using the Network Analyst extension of ArcMap GIS software. This used the walking network to create 100m isochrones up to the maximum acceptable distance for each facility in accordance with the 2013 SLP. The relaxation bands used for each facility are outlined in Table 3-1.

Table 3-1 - Isochrone Bands for Each Facility

Facility	2013 SLP Criteria (m)	Relaxation of 2013 SLP Criteria (m)
Bus Stops	100, 200, 300, 400	500, 600
Food Shops	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200
Primary Schools	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200
GP Surgeries	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200
Rail Services	100, 200, 300, 400, 500, 600, 700, 800	1000, 1200

3.3. Additional Bus Services Criteria

In addition to the bus criteria set out in the 2013 SLP, Atkins was commissioned by SMBC to consider the following additional criteria:

- Cumulative daytime frequency of 30 minutes or better which provide access to local/regional employment and retail centres;
- Cumulative evening and weekend frequency of 60 minutes or better;
- Cumulative daytime frequency of 15 minutes or better and evening/weekend frequency of 60 minutes or better; and
- Cumulative daytime frequency of 30 minutes or better and evening/weekend frequency of 60 minutes or better.

The TRACC dataset from January 2020 was used to extract bus stops which met these criteria, whose coordinates were then mapped in GIS software. Table 3-2 details the conditions which were used to extract data from TRACC.

The number of services at each bus stop per hour were extracted from TRACC. For each bus stop, the average number of services per hour was calculated for each of the time periods, rounded to the nearest whole number. This value was then utilised to identify which bus stops met the 2013 SLP criteria and subsequent relaxations. For example, to identify bus stops with a daytime frequency of 30 minutes or better, bus stops with an average of two or more services per hour on a Monday between 7am and 7pm were included.

Table 3-2 - Criteria for Data Excluded from TRACC

Time of Day/ Week	Criteria
Daytime Frequency	Monday, 7am – 7pm
Evening Frequency	Monday, 7am – 11pm
Weekend Frequency	Saturday, 7am – 7pm

Bus stops within the Borough and up to 400m beyond the Solihull Borough Boundary were included.

3.4. Map Outputs

Maps demonstrating the relaxations of the 2013 SLP criteria for the SLP review are provided in **Appendix C** (see Figures 2A – 2F). Additional maps demonstrating the public transport criteria not set out in the 2013 SLP are provided in **Appendix C** (Figures 3A – 3D). Maps demonstrating aggregate plans using additional public transport criteria are provided in **Appendix C** (see Figures 4A - 4B).

A map showing the 324 residential sites overlaid with the relaxed SLP criteria is provided in **Appendix C** (see Figure 2G).

Figures 2A to F – Relaxation of criteria set out in 2013 SLP

- A. Isochrone of up to 1.2km walk distance to primary schools banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria;
- B. Isochrone of up to 1.2km walk distance to GP Surgeries banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria;
- C. Isochrone of up to 1.2km walk distance to food shops banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria;
- D. Isochrone of up to 600m walk distance to bus stops served by commercial bus services with a cumulative daytime frequency of 15 minutes or better banded by 2013 SLP compliant (up to 400m), +100m and +200m beyond the 2013 SLP criteria);
- E. Isochrone of up to 1.2km walk distance to a rail station which is served by at least three services per hour in at least one direction during peak periods (07:00-09:00 and 16:00 to 18:00) banded by 2013 SLP compliant (up to 800m), +200m and +400m beyond the 2013 SLP criteria; and
- F. Aggregate isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP banded by 2013 SLP compliant and two further relaxations (up to 200m and 400m for local facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria.
- G. Aggregate isochrone of all areas meeting all local facility, bus and rail criteria in the 2013 SLP banded by SLP compliant and two further relaxations (up to 200m and 400m for local facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria overlaid with 324 housing sites from SLP review call for sites.

Figure 3A to D - Additional Public Transport Criteria (not set out in 2013 SLP)

- A. Isochrone of up to 600m walk distance to bus stops served by commercial bus service with a cumulative daytime frequency of 30 minutes or better in 100m bands;
- B. Isochrone of up to 600m walk distance to bus stops served by a commercial bus service within a cumulative daytime frequency of 30 minutes or better and evening/weekend frequency of 60 minutes or better in 100m bands;
- C. Isochrone of up to 600m walk distance to bus stops served by a commercial bus service within a cumulative evening and weekend frequency of 60 minutes or better in 100m bands; and
- D. Isochrone of up to 600m walk distance to bus stops served by a commercial bus service within a cumulative daytime frequency of 15 minutes or better and evening/weekend frequency of 60 minutes or better in 100m bands.

Figure 4A to B – Aggregate Plans for Additional Public Transport Criteria (not set out in 2013 SLP)

- A. Aggregate isochrone of all areas meeting all 2013 SLP facility criteria, 2013 SLP rail and/or additional Public Transport Criteria (Bus stops served by cumulative daytime frequency of 30 minutes or better) banded by 2013 SLP compliant and two further relaxations (up to 200m and 400m for facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria.
- B. Aggregate isochrone of all areas meeting all 2013 SLP facility criteria, rail and/or additional Public Transport Criteria (Bus stops served by a service with a cumulative daytime frequency of 30 minutes or better an evening/weekend frequency of 60 minutes or better) banded by 2013 SLP compliant and two further relaxations (up to 200m and 400m for facilities and rail services and up to 100m and 200m for bus services) beyond the 2013 SLP criteria.

4. Housing Site Accessibility

4.1. Introduction

This section provides a summary of the methodology used to undertake a relative assessment of the 324 residential sites (identified as part of the SLP 'call for sites') from an accessibility perspective. This assessment is based on existing infrastructure and facilities.

The assessment was undertaken based on walking accessibility and does not consider accessibility for other modes. The local facilities and public transport infrastructure identified in the first part of the assessment have been utilised for the 53 new or amended sites presented in Table 1-1. The remaining 271 sites have been assessed using the local facilities and public transport infrastructure identified in the 2019 Solihull Accessibility Mapping Report, as requested by SMBC. Sites defined as 'employment' or 'educational' land uses have not been included in this assessment.

4.2. Points of Access

Potential site access points have been identified in order to assess each of the 324 residential sites against the accessibility criteria set out in policy P7 of the 2013 SLP. The potential site access points have not been subject to a technical review for their feasibility and are intended solely to provide an indication of accessibility.

For each site, a point of access was located at the mid-point of every section of public highway or Public Right of Way (PRoW) bordering the site. This resulted in some sites having multiple points of access. These coordinates were plotted in GIS software (see Figure 5 in **Appendix D**).

The accessibility score provided for each local amenity/ public transport facility to a residential site represents the highest score provided by a single point of access for each residential site. Therefore, sites with multiple points of access were awarded a minimum and a maximum accessibility score. For robustness, the minimum accessibility score has been used to inform the assessment (see **Appendix E**).

For those sites which do not border a public highway or PRoW, a point of access has been assumed on the nearest road. In some cases, it has been assumed that the point of access would have to be provided via another site. Details of the access assumptions are provided in the summary spreadsheet provided in **Appendix E**.

4.3. Accessibility Assessment

4.3.1. Access to Local Facilities

To calculate an accessibility score for each site, GIS software has been used to calculate the distance from each assumed point of access to the nearest facility. The distance to the nearest facility for each site was then identified. Each site was assigned an accessibility score, as shown in Table 4-1. The accessibility to these facilities is based only on distance and does not consider the available capacity at each of these facilities.

Those sites which were fully compliant with the 2013 SLP criteria, or compliant within one or two relaxations were given a defined score. Those which were beyond the greatest relaxation (*), were banded and given a score within the bands defined in Table 4-1, based on distance to the nearest facility, relative to the other sites.

Table 4-1 - Scoring for Accessibility to Local Facilities

Band	Primary School	Food Store	GP Surgery
Policy P7 Accessibility Criteria (up to 800m) and provision of new facilities	100	100	100
Relaxation 1 (up to 1000m)	80	80	80
Relaxation 2 (up to 1200m)	60	60	60
Beyond (over 1200m)	5 – 50*	5 – 50*	5 – 50*

4.3.2. Access to Public Transport

To calculate an accessibility score for each site, GIS Software was used to calculate the distance from each access point to the nearest public transport facility. The distance to the nearest public transport facility from each site was then identified. The accessibility criteria is for bus and/or rail, therefore, each site was given a score that represents the highest score for bus or rail accessibility, as shown in Table 4-2. For example, if a site scores 80 for bus accessibility and 60 for rail accessibility, the site would be awarded a score of 80 for public transport accessibility. This assessment does not take into consideration the existing capacity on bus and rail services.

Those sites which were fully compliant with the 2013 SLP criteria, or compliant within one or two relaxations were given a defined score. Those which were beyond the greatest relaxation (*), were banded and given a score within the bands defined in Table 4-2 based on distance to the nearest facility, relative to the other sites.

Table 4-2 - Scoring for Accessibility to Public Transport Services

Band	Bus Services	Rail Services
Policy P7 Accessibility Criteria (up to 400m for bus and 800m for rail) and provision of new facilities	100	100
Relaxation 1 (up to 500m for bus and 1000m for rail)	80	80
Relaxation 2 (up to 600m for bus and 1200m for rail)	60	60
Beyond (over 600m for bus and 1200m for rail)	5 – 50*	5 – 50*

4.3.3. Total Accessibility Score

The accessibility score for local facilities and the accessibility score for public transport have been added together to provide a total accessibility score for each potential housing site. The 324 sites have then been ranked according to the total accessibility score. The higher the accessibility score, the more accessible the site is deemed to be.

Figure 6A (in **Appendix F**) outlines the total accessibility score for each of the potential housing sites ranked relative to each other (banding in quantiles) from the least accessible locations in red to the most accessible locations in green. At the request of SMBC, Figure 6B (**Appendix F**) shows the total accessibility score for each of the potential housing sites where green sites are those with the highest accessibility score, and red sites are those with the lowest. This score does not reflect the possibility of taking multiple, adjacent sites forward together.

It is important to note that the accessibility scores for the 53 sites outlined in Table 1-1 are based on the updated database for local facilities and public transport data from 2020. The remaining 271 sites from the 2019 Solihull Accessibility Mapping Report will be based on the previous database from 2018 as per SMBC instruction.

4.4. Provision of New or Improved Facilities and Infrastructure

4.4.1. Provision of New Facilities and Infrastructure

Some of the sites provided by SMBC were identified as potentially providing a school or retail facilities, based on guidance presented in *Sustainable Settlement: A Guide for Planners Designers and Developers* in relation to the number of dwellings provided on the site. SMBC provided the housing allocations for some of the sites, however, for those sites where no housing allocation was provided, an assumption of 30 dwellings per hectare has been used. For sites that were of a sufficient size to justify the provision of a school/retail facilities, a comment has been provided in the summary spreadsheet (**Appendix E**) in relation to the impact that the provision of these facilities would have on accessibility from adjacent residential sites.

SMBC have identified that there are a number of committed infrastructure schemes which are likely to come forward during the duration of the SLP review that will affect access to local facilities and public transport

infrastructure. The impact of future transport infrastructure or development on the proposed site submissions will be assessed by the Council.

4.4.2. Suitability of Walking Routes

In order to identify sites which may use '*unsuitable*' walking routes to access local facilities and public transport infrastructure, the assessment has identified sites that currently have access onto a road with no footway provision.

A manual search was conducted for the 53 sites outlined in Table 1-1 to identify if there was footway provision along the frontage of the site. The footway provision of the sites assessed in the 2019 Solihull Accessibility Mapping Report have not been updated, as per SMBC instruction. For the purposes of this assessment, no consideration has been given to the adequacy of the provision, for example the width or quality of the footway. A comment has been provided for each site in the summary spreadsheet (**Appendix E**), as follows:

- No footway provision along site frontage –at least one road fronting the site does not have footway provision.
- Footway provision along site frontage – all roads fronting the site have footway provision.

5. Summary and Conclusion

5.1. Summary

Atkins has been commissioned by SMBC to assess accessibility to local facilities and public transport infrastructure within the Solihull Borough Boundary. This assessment has been based on accessibility criteria set out in Policy P7 (Accessibility of Ease of Access) of the 2013 Solihull Local Plan. A systematic approach has been taken to understand which areas of the Borough meet the Policy P7 criteria, and relaxations of this criteria. The results of this assessment have been used to undertake a relative comparison of 324 potential housing sites put forward as part of the SLP review call for sites, against the 2013 SLP Policy P7 criteria.

This assessment is a technical document to support the evidence base for the Local Plan Review and site selection process. The purpose of this assessment is to compare settlements and housing site submissions on a like-for-like basis against current accessibility levels. The outputs of the study indicate where accessibility levels would require improvement to sustainably accommodate new residential development. It is beyond the scope of this study to evaluate the capacity of facilities or public transport corridors nor assess the impacts of the aggregated site submissions. The Council will give due consideration to the findings of this report in the Local Plan Review.

5.2. Conclusion

It is considered that this study provides a systematic assessment of accessibility within the Solihull Borough Boundary. The outputs can be used for the future assessment of potential housing sites identified in the SLP from an accessibility perspective.
