INTRODUCTION

In England, weather is unpredictable and the occurrence of wintry conditions varies considerably through the season and from year to year. Generally severe conditions might reasonably be expected in December, January and February; are less likely in November and March and are possible but unlikely in October and April.

Operational winter maintenance periods need to be defined, to strike a balance between economy and an effective service. To plan resources regularly on the assumption of a long hard winter would be wasteful, but to do so on the assumption of a short, mild winter may lead to a deficient service at times.

Planning should be undertaken between these extremes, but with enough support at reasonable notice to react to unforeseen circumstances.

Put simply, resources should be directed:

- In the right way;
- In the right place; and
- At the right time.

Winter Maintenance comprises the treatment of the highway to:

- i) Prevent ice from forming (Precautionary salting);
- ii) Melt ice that has already formed (Post salting); and
- iii) Remove snow.

Winter Maintenance forms an integral part of the highway maintenance function and as a highway authority Solihull MBC spends in the region of £465,000 per year on salting and snow clearing operations. Most of this money is spent on salting, either pre-salting to prevent the build-up of ice, or post salting to disperse ice that has already formed.

Although there are times during a winter when a true emergency exists, occasioned by heavy or drifting snow, most winter maintenance operations can be planned in a systematic manner. The extent of this planning will be dependent upon the nature of each authority and the severity of its average winter.

This Plan sets out standards for the treatment of the Borough's roads under the varying conditions of ice and snow, and sets out a framework of good practice within which the winter maintenance operation is managed.

The standards set out in this Plan for snow and ice clearance reflect the recommendations contained in the Code of Practice for Highway Maintenance Management – “Well Managed Highway Infrastructure” published October 2016.

POLICY STATEMENT

In England and Wales Section 41 (1A) of the Highways Act 1980, revised by the introduction of Section 111 of the Railways and Transport Act 2003, places a duty on local councils to provide a winter service.

“in particular, a Highway Authority are under a duty to ensure, so far as is reasonably practicable, that safe passage along a highway is not endangered by snow or ice”. The objective of the winter service operation within Solihull is, as far as reasonably possible, to maintain safe movement of vehicular traffic on the Strategic Network.

Nine gritting routes have been identified for both pre salting and snow clearing. The routes have been designed to ensure efficient route treatment of the network.

The Plan includes treatments to provide safe pedestrian routes in high amenity areas such as town centres and shopping areas.

The policy of the Council is to carry out gritting on our strategic highway network and ‘Centro’ bus routes where the service operates up to and including 30 minute intervals. When roads are removed from the ‘Centro’ bus routes, they will not be deleted from the approved routes as road users have become accustomed to these areas being gritted.

It is particularly important that both the policy and the operational plan for the Winter Service are developed within the wider context and the following issues have been considered:

- Treatment of facilities for walking and cycling.
- Treatment of facilities for public transport users.
- Treatment of transport interchanges.
- Treatment of “promoted” facilities.
- Extent of priority for emergency and other key facilities.
- Extent of priority for potentially vulnerable users.
- Other local circumstances.

The service standards adopted for this purpose are:

The Winter Service period runs from **mid-November to mid-March each year**, when the following standards apply (outside this period resources are available to respond to the occasional problem):

- All routes forming part of the Winter Service Plan will be gritted within 3 hours. Refer to route plan for detail of routes gritted.

- High Amenity Footways, comprising of the Town Centres of Solihull, Shirley, Knowle , Hobs Moat , Marston Green, Chelmsley Wood and Dorridge will be gritted by 8-00am, or as and when the prevailing weather conditions dictate.
- Other roads and other footways will be treated only in exceptional circumstances of severe weather.
- Salt bins are located on roads, which meet the calculated criteria of need described in the operational plan and at important centre such as schools, hospitals, railway stations and Council owned old peoples residential homes not sited on the treated highway.
- Pre salting operations will as far as possible be consistent for each occasion in accordance with the Code's advice. However, in times of freezing rain, sleet or snow the timing and process used may be varied by the Standby Officer to best deal with the prevailing difficult conditions.
- Where flooding occurs due to run off from fields in rural areas, road signs will be erected indicating water on the surface of the road.
- When third party requests are received, the Police will be given priority over other requests and all requests will need to be considered against the available resources.

PLANT AND VEHICLE INVENTORY

The plant and vehicles used in the Winter Service Operations include:

- 3 no. Dedicated Gritters - 9m³ capacity.
- 4 no. Dedicated Gritters - 6m³ capacity
- 2 no. Demountable Gritters and Bodies - 5m³ capacity.
- 9 no. Snow ploughs (Mountable when required).
- 8 no. Handsalt Spreaders -52ltr capacity
- 1 no. Loading Shovel 1.5m³ capacity.

The contractor shall ensure that all equipment has been fully serviced and certified at least four-weeks prior to commencement of the winter period.

CONDITIONS THAT DETERMINE THE SALTING PROCEDURE

The following table sets out the action required in terms of salting dependent upon road and weather conditions:

ROAD CONDITIONS		Wet	Known Wet Patches	Dry	Pre-salted within the last 24 hours with no rain since
Road Surface Temperature	Precipitation etc. No Fog				
May fall below Freezing	No Rain No Hoar frost No Fog	1	2	6	6
Expected to fall below freezing	No Rain No Hoar Frost	1	2	6	6
Expected to fall below freezing	Expected Hoar frost Expected Frost	1	2 & 4	6	6
Expected to fall below freezing	Expected Rain Before Freezing	1	3	3	3
Expected to fall below freezing	Expected Rain During Freezing	1 & 4	1 & 4	4	4
Expected to fall below freezing	Possible Rain Possible Hoar frost Possible Fog	4	5	5	5

Action

1	Salt early evening
2	Salt wet patches early evening
3	Salt after rain stops

4	Salt Early morning
5	Supervisor inspect early morning with crews standing in depot for instruction
6	No action

High Amenity Footways will be treated when road salting is carried out except where surface temperatures are expected to rise, and stay, above freezing by 5:00am.

RESPONSE AND TREATMENT TIMES

The response time is defined as the period between the instruction to treat the network being given, and when the vehicles have been loaded for salting and are due to leave the depot. This period should be no longer than **one hour**.

The treatment time is defined as the period between loaded vehicles leaving the depot and the completion of treatment on all routes.

The times contained on the table below detail the maximum treatment times for various Winter Service treatments:

Salting Type	Coverage	Response Time	Treatment Time
Precautionary Gritting	All Routes	1 hour	3 hours
Footways (High amenity priority) before 0800 hrs. Others as per plan	As per plan	1 hour	3 hours
Post or Increased Spread Rate Gritting	All Routes	1 hour	3 hours
*Ploughing	All Routes	1 hour	3 hours
*Snow Clearing	All Routes	2 hours	6 hours
*Heavy Snow Clearing	All Routes	2 hours	24 hours

***In the event of severe conditions, or snow ploughing conditions, the service will give priority to clearing principal / strategic roads.**

OPERATIONAL DECISION MAKING PROCESS

Officers of Highway Services check the forecasts during normal working hours. The forecasts are supplied by Metdesk. A decision is then made based on the procedure detailed above. The decision is then communicated to the contractor, shown diagrammatically below.

WINTER SERVICE ROUTE PLANNING

Carriageways

In considering the Borough's Strategic Route Network, and Bus Routes, we have identified nine precautionary salting routes. These roads are salted each time winter conditions dictate.

During extreme conditions operations will be directed towards keeping the Principal and the Strategic Road Network open to traffic.

Route details are shown in Appendix 1.

Footways

Under normal winter maintenance operations (i.e. precautionary salts) footways are treated as follows:

- High Amenity Footways, comprising of the Town Centres of Solihull, Shirley, Knowle, Hobs Moat, Marston Green, Chelmsley Wood and Dorridge, will be gritted by 8-00am as per attached plans shown in Appendix 2.

However, when severe conditions are encountered and the **criteria detailed below is met then** treatment to footways will be carried out using the Strategic Highways Contract partner, and / or the Council's "StreetCare" partnership operatives. They are contracted by the Authority to "clear snow from specified areas, by applying grit and / or salt as instructed by the Highway Services Manager and when they are unable to undertake their normal duties".

“TRIGGERS” (FOR SEVERE CONDITIONS)

1. 100mm and over of deep undisturbed snow.
2. Severe climatic Conditions, where severe frosts, ice or light snow (less than 100mm deep) occur for long periods.

Footpaths will be categorised in the following priority:-

High Amenity Footways

The town centres of Solihull, Shirley, Knowle, Hobs Moat, Marston Green Chelmsley Wood and Dorridge.

Priority One Footways

These comprise of the Council's Town Centre **core** areas. They are Solihull, Shirley, Hobs Moat, Chelmsley Wood, Knowle, Dorridge, Balsall Common, Berkswell, Kingshurst, Smithswood, Castle Bromwich, Meriden, Hampton in Arden, Hockley Heath, Elmdon/Lyndon, and Marston Green. Footways on public highways which serve Bus Stations, Railway Stations, Schools and Hospitals will also be treated.

Priority Two Footways

These footways in this category consist of other commercial areas of the Borough subway / overbridge ramps.

Priority Three Footways

The footways in this category will receive reactive treatment during more severe wintry conditions and will consist of areas around council owned residential homes, Day Centres and senior citizens housing and is linked to the previous social inclusion section.

GRIT BINS

The Council locates Grit Bins as an aid to road safety. These will be sited off the treated Highway Network in locations where the criterion for grit bins is met. Bins will also be placed at accesses to important centres such as schools, hospitals, railway stations and older people' residential homes not sited on the treated Highway Network or having a grit bin placed based on the criteria for a bin Regular Winter Service analysis will identify locations where additional grit bins may be required; i.e. known "accident hotspots".

The grit bins shall be provided for the members of the public using their own spreading equipment; however the salt is not intended for use on private areas, except by the Emergency Services. For environmental reasons salt will not be deposited at the roadside without some form of containment. Grit Bin Locations can be found in appendix 3

Grit Bins: Site Assessment Criteria

The traffic groups are as defined below:

	<u>Type of Road</u>	<u>Definition</u>
1	Primary Road	A - classified roads
2	Town Centre	High amenity areas
3	Principal Road	Other A class roads
4	District Distributors	B – classified roads, bus and cycle routes and links to industrial areas from Traffic group 3
5	Residential Distributors	
6	Minor Residential Roads	cul-de-sac

Grit Bins: Site Assessment Forms

Road Name Name of Assessor
Location Requested by
Ward Date of Assessment

1. Gradient of a Carriageway

- a) Less than 1 in 30 Nil
- b) 1 in 15 to 1 in 29 40
- c) Greater than 1 in 14 75

2. Carriageway Horizontal Alignment

- a) Sharp Bend 60
- b) No Bend Nil

3. Close proximity (25m) and falling towards

- a) Heavily trafficked road (Groups 1,2,3) 90
- b) Moderate (Group 4) 75
- c) Lightly trafficked road (Group 5) 50
- d) Lightly trafficked road (Group 6) 30

4. Traffic Density at Peak Times

- a) Heavy (Groups 1,2 & 3) 60
- b) Moderate (Groups 4) 40
- c) Light (Group 5) 20
- d) Light (Group 6) Nil

5. Number of Premises for which only access (cul-de-sac)

- a) Over 50 30
- b) 20 – 50 20
- c) 0 – 20 Nil

6. Disabled or elderly persons in Council or privately operated older persons' Residential homes are served and there is not an existing grit bin provided either privately or publicly

- a) Yes 20
- b) No Nil

<u>Assessment Total</u> <u>Score</u>		<u>Grit Bin Approved</u>	Yes/No
---	--	---------------------------------	--------

Approval Score to exceed 100

INFORMATION AND PUBLICITY

This document has been produced in consultation with the following key stakeholders who will also receive a copy of this document:

Chief Executive
Cabinet Members
Corporate Directors
Emergency Planning Officer
Director of Transport, Highway & Environmental
Police
AA and RAC
Centro
Ambulance Service
Fire Service
Freight Transport Association
National Exhibition Centre
Birmingham Airport
Birmingham City Council
Coventry C.C
Warwickshire C.C
Strategic Highways Contract Partner
Amey (Maintenance Agent for the Highway Agency Areas 11 & 12)

Media Information

To provide information to the public, the winter weather service provider informs the media of the weather conditions likely to be expected especially any **severe** conditions that can be predicted through their normal forecasting procedures.

To ensure the community is made aware of the salting routes treated; a Borough map will be displayed in the following locations:

Libraries, Solihull Connect, Housing offices at Smiths Wood, Chelmsley, Kingshurst, Urban Traffic Control centre, Police Stations, Ambulance Stations, Fire Stations, public transport operators, motoring organisations, leisure centres, Social Care offices, Keepers Lodge, Sans Souci and other Information centres.

In addition the Council's web page has links to this plan and the public can browse information on the gritting routes for both roads and footways and the location of grit bins within the borough.

Prior to the winter service start date the plans will be distributed by the Neighbourhood Co-ordinators in their areas.

Where there is a need to inform the road users of a change to the policy or other messages during the winter Maintenance Period, an approved press release will be distributed by the Communications team to both radio and local press and the Contact Centre, the Web pages will also be updated to reflect such changes. This will be monitored to ensure the message is being relayed regularly to ensure the majority of road users are aware of the message.

CONTINUOUS IMPROVEMENT

All aspects of the Winter Service Plan are reviewed throughout the winter season. Any new initiatives are identified and relevant changes to the service made.

Participation with the Highway Infrastructure Management Group will continue to be undertaken to ensure new developments and co-operation with other West Midlands Councils continues.

If you have any comments on this Winter Services Plan or want to contribute to developing this service then please contact:
